Setup instruction

Install Azure CLI and authenticate

Run this in PowerShell

```
winget install --exact --id Microsoft.AzureCLI
```

Authenticate with Azure. Be sure that the account you are authenticating against has access to the current Azure resources

```
az login
```

Setup project environment

You must have Node.js 24+ and npm

Clone the project

```
git clone https://github.com/justapieop/uet-cloud.git -b dev
```

Install dependencies

```
npm i
```

Configure the environment:

- Step 1: Create a `.env` file
- Step 2: Fill in the variables. For example:

```
NODE_ENV=development
PORT=3000
CONFIG_SOURCE=azure
AZURE_APPCONFIG_ENDPOINT=https://kumo-config.azconfig.io
```

Note: `CONFIG_SOURCE` is currently incomplete so you must use `azure`. Further configuration for this will be explained right below.

Create resource in Azure

Currently, the resources used are like the following:  Current Azure resource

Note: All resource must be in the same region.
